

FIGHTING FIRE WITH FIRE

SEI
INDUSTRIES

(actual size)

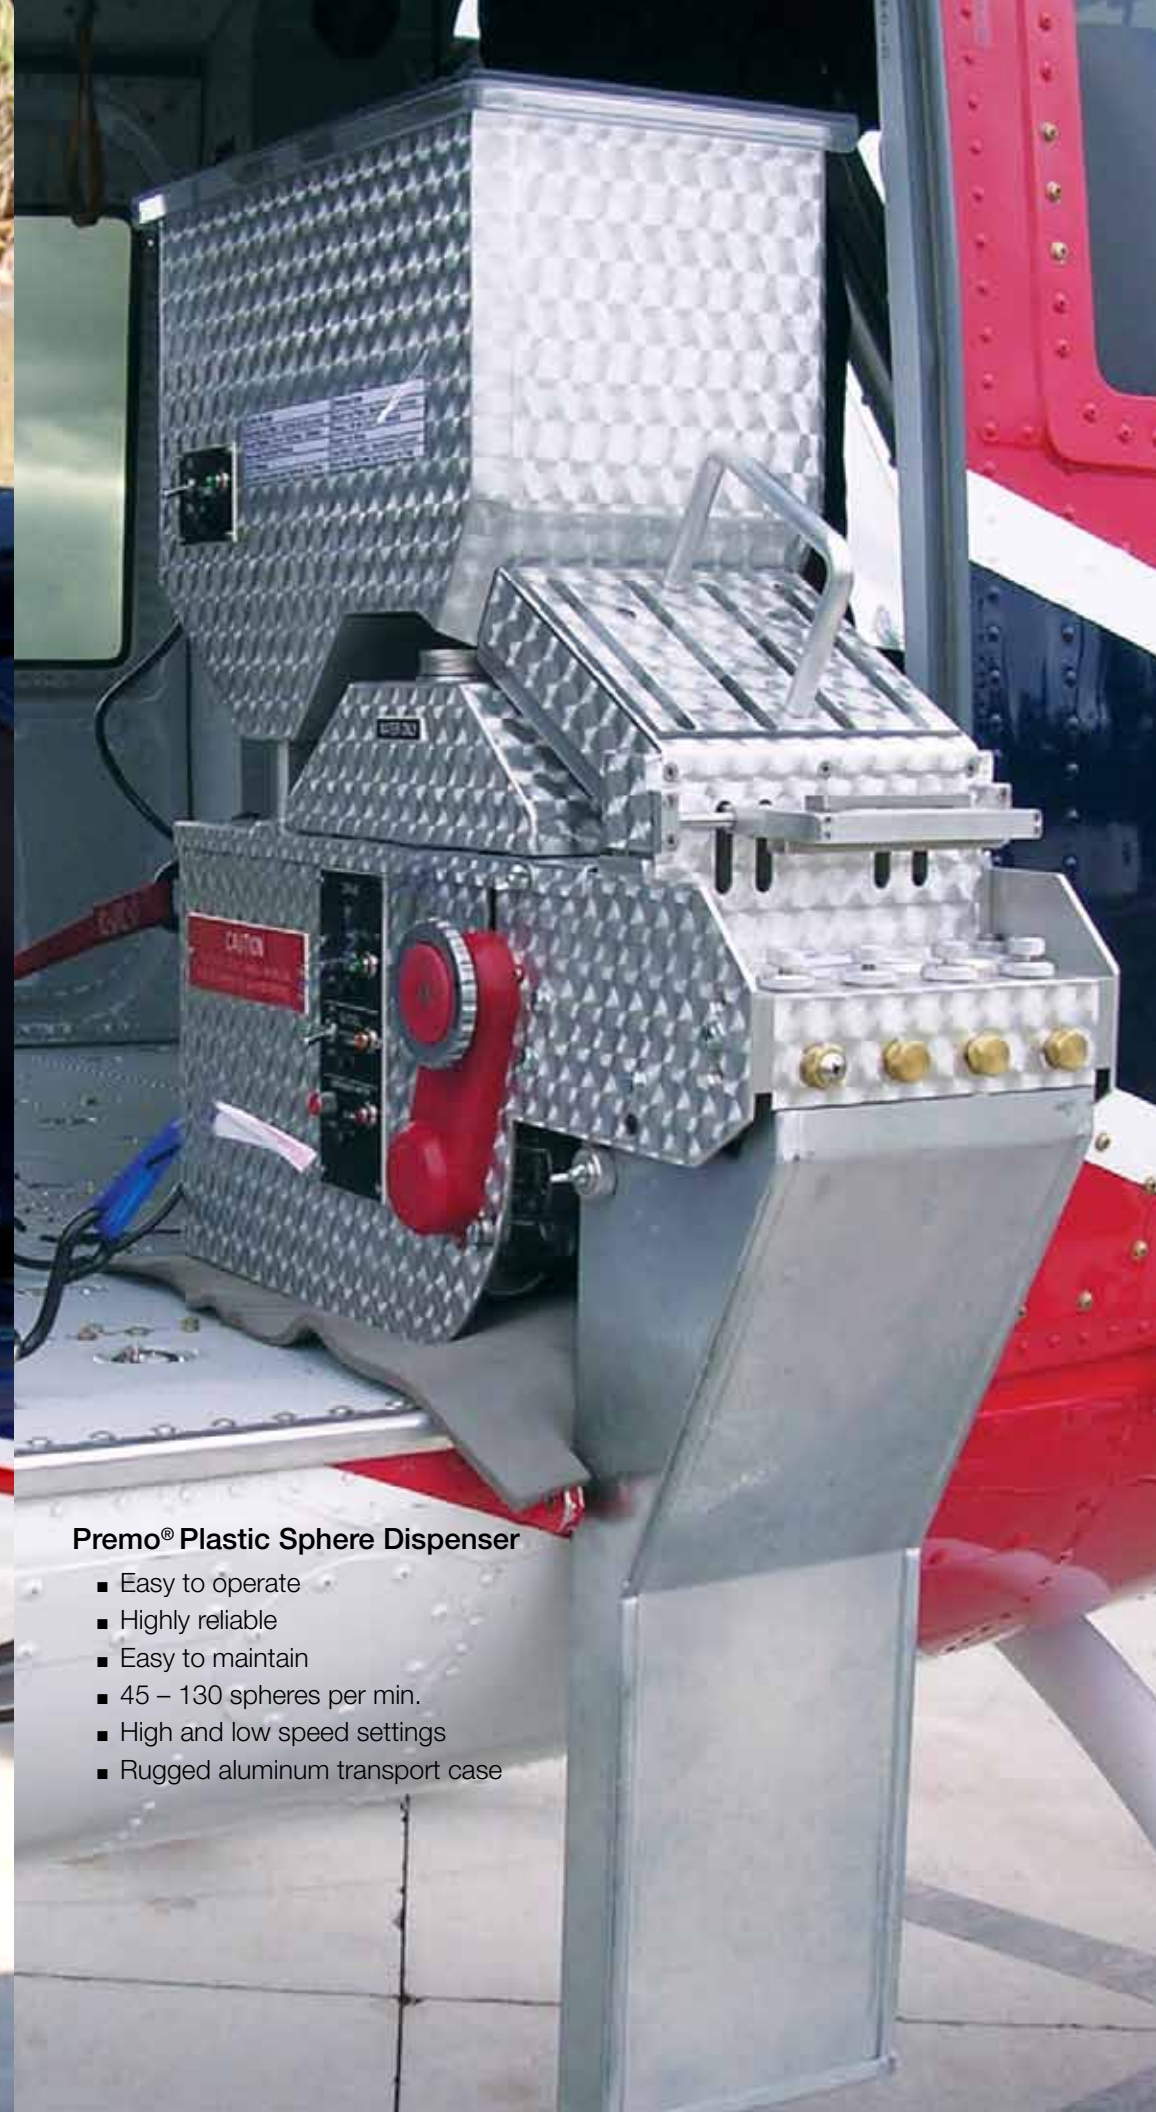

ENTER THE DRAGON

The Dragon division of SEI Industries Ltd. was created in 2003 with the goal of developing an improved Plastic Sphere Dispenser (PSD). Dragon division products offer a series of new aerial and ground ignition dispensers and vastly improved fire ignition spheres. Dragon Eggs are compatible with all aerial and ground ignition dispensers and launchers.

Red Dragon® Plastic Sphere Dispenser

- Increased hopper capacity (750 spheres)
- Variable speed (25 – 175 spheres per min.)
- Compact, lightweight, low maintenance
- Automatic jam detection and clearing
- Remote control tether
- No calibration required

Premo® Plastic Sphere Dispenser

- Easy to operate
- Highly reliable
- Easy to maintain
- 45 – 130 spheres per min.
- High and low speed settings
- Rugged aluminum transport case

(actual size)

PREMO STANDARD

The Premo Plastic Sphere Dispenser (PSD) is the industry's most used aerial ignition dispenser. The Premo PSD is designed to safely inject Premo Fireballs with ethylene glycol and accurately release them over targeted areas for prescribed and controlled burning.

GROUND IGNITION

Green Dragon®

- Fully automated and easy to operate
- Variable range up to 225 ft. (70 m)
- Pivots 180° radius for direction control
- Delivers up to 40 spheres per min.
- Easily mounted to trucks, ATVs, UTVs, etc

The Green Dragon is an automated ground launcher designed and engineered for use in wildfire and land management applications such as controlled or prescribed burning. Its design represents a brand new concept for ground ignition applications using compressed gas as a propellant and a simple electrically-driven reciprocating feed and firing system. The Green Dragon is a 'gamechanger' by providing a lower cost option for helicopter aerial ignition in some areas and applications.

HAND LAUNCHERS

Pyroshot™

The single-shot Pyroshot is a hand-held, spring-powered Dragon Egg launcher. Costing far less than traditional flare guns, the Pyroshot can launch spheres upwards of 75 ft. (23 m) and is a lightweight tool for use with Dragon Eggs. The Pyroshot offers both improved safety and efficiency on prescribed and controlled burns.

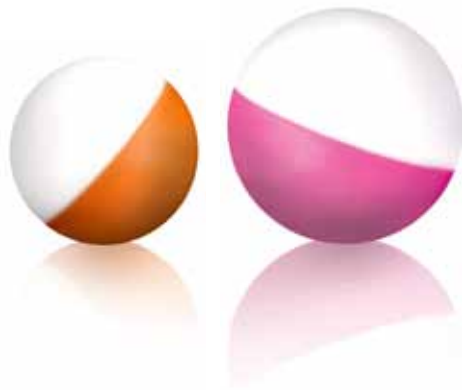

Pyroshot™ HS

The Pyroshot 'High Speed' is a gas-propelled, trigger-activated Dragon Egg hand-launcher. The Pyroshot HS uses a 5 lbs. CO₂ beverage bottle (or a 20 ounce mini-bottle carried on the belt) to easily launch Dragon Eggs 320 ft. (100 m) and beyond at 155 psi. The Pyroshot HS is portable, safe and very easy to use.

THE SPHERES

Dragon® Eggs and **Premo® Fireballs**, manufactured by SEI Industries Ltd., provide a safe and reliable ignition source for use in prescribed and controlled burn operations. SEI's fire ignition spheres are made to the highest quality control standards and are engineered to light consistently and burn vigorously in all fuel types and ambient conditions.
