

MODULAR FUEL STORAGE & DISTRIBUTION SYSTEM

The Modular Fuel Storage and Distribution System is designed for rapid deployment and mobility to provide refueling capabilities to front line combat units. The system consists of four identical stand-alone units that can be attached together quickly to form a single 20' [FT] ISO container for easy shipment by land, sea or air. All units are painted military green or tan CARC II.

The modular containers act as stand alone 5,000 USG / 20,000 L fuel storage and distribution systems that can be deployed by ground or air to forward tactical locations as individual systems or used together to form a larger 20,000 USG/80,000 L system at a larger fuel depot. Modular containers include helicopter lifting points and forklift pockets.

The system includes a diesel and electric fill/discharge pump system with mechanical totalizing flow meter, fuel filtration (aviation or ground) and an inlet connection to refuel the system from bulk fuel sources as well as a hose reel with 100 ft. /30 m of hose, grounding reel and fuel nozzles to refuel military vehicles. All components remain inside modular containers for protection.

Each modular container includes a 5,000 USG/ 20,000 L Terra Tank™ collapsible fuel bladder with Insta-Berm™ secondary containment, RainDrain™ rain water management system, Sun Shade and connection hoses.

MINI MOBILE FUEL STORAGE & DISTRIBUTION SYSTEM

Crate Includes:

- Terra Tank™ 5,000 USG/ 20,000 L collapsible fuel bladder.
- Insta-Berm™ 5,500 USG/ 22,000 L secondary containment.
- Rain Drain™ rain water management system
- Two x 2" [IN]/ 50mm x 25' [FT]/ 15m connection hoses with camlocks.
- Sun Shade
- Repair Kits
- Spare Filters

100' Ft/30 m x 1.5" [IN]/38mm discharge hose with refueling nozzle and static grounding reel.

Auxillary 100 GPM (380 LPM) Yanmar diesel powered centrifugal pump.

Powder coated stainless steel manifold with four-way valve for system refueling/discharging.

Ground or aviation fuel filtration vessel.

Liquid Controls mechanical totalizing flow meter.

100 GPM (380 LPM) electric motor powered centrifugal pump
