FTDS – Frac Tank Deployment System – takes the place of 6 people assists with rolling and unrolling the tanks.

PORTABLE AND LIGHTWEIGHT

With an FTDS (Frac Tank Deployment System) attached to a skid steer, an operator plus one helper can mob and demob an entire frac water storage system in the fraction of the time as for steel frac tanks.

- 10 - 15 minutes to set up
- 15 - 20 minutes to take down

96% REDUCTION IN SHIPPING COSTS

One semi-truck can deliver 24 HIPPO frac tanks which equals 1.2 million gallons of water or 28,800 BBLs. This will reduce 57 truck hauls or 228 times a semi-truck would travel on and off your site.

Now, you do the math based on your local transport rates!

OUR ADVANTAGE IS IN THE FABRIC

The HIPPO tank is a proprietary fabric blend that combines folding flexibility with unsurpassed exterior strength.

The mighty HIPPO tank fabric is tested to 73,000 cycles and is designed to handle all weather conditions from -50 °C / -58 °F to +72 °C / +161 °F. It is up to 12x stronger than standard fabric in abrasion testing.

OUR EXPERTISE IS IN THE MANUFACTURING PROCESS

More than 35 years of fabric technology and engineering makes SEI a world-leader in liquid containment design and manufacturing.

SEI uses radio-frequency RF welding to create the strongest welds.

SEI customers have field-tested individual HIPPO tanks to more than 200 moves without a weld separation!

HIPPO FRAC TANK SPECIFICATIONS		
Tank Size	Tank Volume	Tank Weight
33' x 50' (10 m x 15.3 m)	50,000 USG (190 m ³) 1,200 BBL	1000 lbs. (454 kg)
