

Technical Bulletin

Date: June 4, 2015

Product Line: Dragon

Models: Red Dragon PSD

Subject: New Wide Exit Chute

Details

A new exit chute has been developed for the Red Dragon Plastic Sphere Dispenser (PSD). The new chute extends the width of the machine in order to catch any glycol or permanganate that may have accumulated at the injection head. There are no significant performance or safety concerns associated with using the original chute. Several of the new chutes have been trialled with positive results. All new Red Dragon PSDs will include the new wide chute.

The new chute is easily distinguished from the original chute by its width and colour (see Figure 1). The new chute will have the same black finish as the hopper, while the original chute is red. No modification to the machine is required to install the new chute.

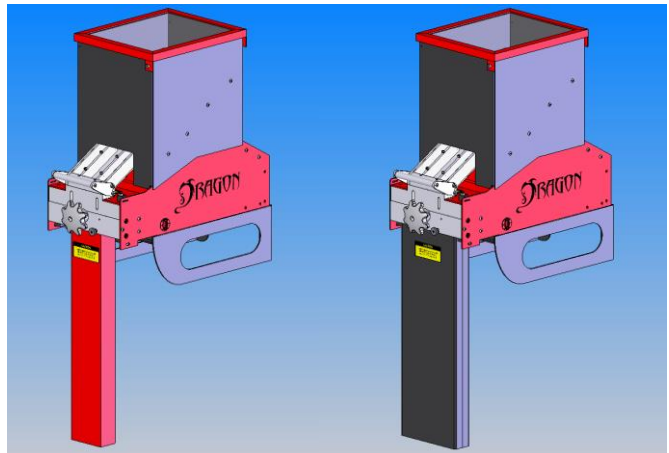

Figure 1 - The original chute (005119) is shown on the left and the new chute (011757) is shown on the right

SEI will sell the new chute as part 011757 (CHUTE,EXIT,WIDE,ASSY) for customers who would like to upgrade their machines. The original chute 005119 (CHUTE,OUTLET,ASSY) will no longer be available for purchase.

For further details, please contact the following SEI representatives.
