

# JUNGLE KING GAS

## SEI INDUSTRIES

This collapsible tank is purpose-built for gasoline fuel storage in hot, humid and wet climates. The Jungle King Gas is constructed from a multicoated, high-durability fabric using SEI's proprietary PetroH2Ohesive™. The Jungle King Gas has an external coating with excellent UV and hydrolysis resistance; its internal coating was designed specifically for gasoline and affords the tank a longer life expectancy compared to any other urethane collapsible fabric tank in jungle climates.

Additionally, the vent system can be submerged up to eight inches, helping it handle flash rainfalls. It is ideally suited for even the most extreme jungle conditions. Jungle King Gas combines portability and versatility with economy. A full range of standard sizes are available, with custom sizes on request.

### **Collapsible tank features**

- Desert King is certified to CAN/CSA-B837-14;
- 100% RF (Radio Frequency) welded;
- Is deployed rapidly with minimal ground disturbance;
- Easy to fold, transport and relocate;
- Tank continually adjusts to any volume of liquid so that air cannot accumulate, reducing microbiological growth;
- Lightweight, meaning savings on transport costs; and
- Won't rust or corrode like traditional storage tanks or drums.

### **Exclusive to the Jungle Gas King Fabric:**

- Exclusive Jungle King Gas fabric exceeds US military specifications;
- Hydrolysis-resistant outer coating;
- Gasoline-compatible inner coating, capable of handling up to 10% ethanol;
- Quality of fuel is preserved, extending equipment life and safety;
- Is suitable for JP-1, JP-4, JP-8, kerosene, diesel and gasoline fuels with less than 60% aromatic content; and
- It comes with a one-year manufacturer's warranty.

# JUNGLE KING GAS

The Jungle King Gas is constructed with a polyester-based polyurethane inner coating that is suitable for the storage of gasoline, gasohol or gasoline with ethanol. It also incorporates a polyether-based polyurethane outer coating that includes a hydrolysis-resistant adhesive coating that's ideal for the jungle environment. Unlike traditional hot-air welded lap seam or butt seam tanks,

SEI's unique 100% radio-frequency welded cross-seam design ensures that the inside coating never meets the outside environment and vice versa.
