

Ground Fire Ignition Pyroshot HS Precision Sphere Launcher

The products within the Dragon division are the result of collaborative work between SEI Industries Ltd. and Field Support Services

The Pyroshot 'High Speed' is a gas-propelled, trigger-activated Dragon Egg hand-launcher. The Pyroshot HS uses a 5 lbs. CO₂ beverage bottle (or a 20 ounce mini-bottle carried on the belt) to easily launch Dragon Eggs 320 ft.

This new hand-launcher is extremely cost effective in Rx fire applications. At 25 cents per round, this launcher is less than 4% of the cost of the cheapest flares per shot.

Areas, where flares have not been cost effective, can now be burned using this new launcher. Large drainage areas can also be burned without anyone leaving the safety of ridges.

FEATURES

- Up to 320 ft. (100m) @ 135 psi launching range
- No open flame
- 250 cc glycol bottle to charge about 350 spheres
- Compatible with 1" Dragon Eggs
