

Ground Fire Ignition Pyroshot Handheld Launcher Fire Tool

The products within the Dragon division are the result of collaborative work between SEI Industries Ltd. and Field Support Services

The Pyroshot is one of the newest tools to support ground fire ignition during burn operations. The single-shot Pyroshot is an incendiary plastic sphere dispenser that can best be described as a hand-held, spring-powered gun. Costing far less than traditional flare guns, the Pyroshot can launch spheres upwards of 75 ft. (23m) and is a lightweight tool that uses SEI's Dragon Eggs.

Since there is no open flame, the Pyroshot can safely be used in areas where a drip torch may present a hazard and it can launch from a variety of platforms.

FEATURES

- Up to 75 ft. (23m) launching range
- No open flame
- 250 cc glycol bottle to charge about 500 spheres
- Compatible with 1" Dragon Eggs
